

Eye Wound Care

- Leave dressing dry and in place until your appointment with ophthalmologist.
- For pain relief take Paracetamol/ Panamax or Panadine medication, not Aspirin or Anti-inflammatory medication unless prescribed by your doctor.
- If bleeding occurs – apply firm pressure for 20minutes. Sit still for this time period. If bleeding persists call the day surgery.
- You will be given a referral letter by the nurse/ doctor, please take this to your next appointment with your Ophthalmologist.
